

TOUCHPOINT CHANGE!

Delivering The Promise Of IT

When it comes to Information and Communication Technology, the return on investment is not governed solely by the intricacy of the systems, the flexibility of the architecture, their user friendliness, or even the strength of the project management. It is governed by the way the whole organisation works together to manage the lifecycle.

From the information strategy, which lays out the framework for the usage, retention and protection of data, through the design and development and on to the usage and exploitation of the systems. The management of the end-to-end lifecycle is critical. It dictates the ultimate usability of the systems, the financial return and the quality of the information available for continuous improvement of product and process.

Touchpoint Change can help you integrate all of these drivers. We provide anything from a few days of consultancy to a team for a multi-million pound system implementation. We offer:

- Project and Programme Managers
- IS Strategy/ Architecture Managers
- IT Change Professionals
- Business Readiness/ User Test Managers
- Specialist roles (eg. business continuity)
- Project Assurance or Peer Reviews

Our team will work closely with your IT and Operational functions to get a project started and deliver it successfully. We bring new experience and insight to give you the confidence to decide when to invest and when to exploit what you already have.

Contact us now and we will start to help you achieve the change you need.
